Con: Repair instruction re-glue metal placeholder on glass plate

Please follow the steps below to re-glue the metal placeholder with the black MS Polymeer glue

- Dismount the black alu placeholder from the gass strut (One stainless steel screw)
- Make a template to re-position the black alu placeholder
- Remove the old glue from the black alu placeholder and glass plate. Please do this carefully with a flat knife
- Lightly sand the surface of the black aluminium plate with sandpaper
- Remove all grease, dust from both surfaces with a degreaser
- Apply the black MS Polymeer glue on the surface of the black alu placeholder
- Put the black alu placeholder with the MS Polymeer on the glass plate and put some pressure on the alu placeholder to make sure that the glue is qually spread
- Let it dry for minimum 48 hours
- After drying for 24 hours, mount the gas spring again. Open the window before doing this.

If you follow the above step it should work.
